

Forecourt Services

Forecourt Maintenance

Ancorra Environmental can provide a professional and compliant solution for all your forecourt maintenance and decommissioning requirements, including;

- **Interceptor, drain and gully cleaning**
- **Forecourt Canopy & Totum Pole Cleaning**
- **Product removal/fuel transfers**
- **De-sludging, cleaning and gas free certification of tanks**
- **Cleaning/purging of tanks and pipework**
- **Decommissioning of pumps and associated pipe work**
- **Foam Injection for Tank or Void Space Filling**

All our operatives are fully trained in confined spaces, breathing apparatus, high pressure jetting and hold UKPIA and CCNSG (SCATS) safety passports.

Tank, Void and Pipeline Decommissioning

For on site decommissioning you can benefit from the full range of our in house capabilities based on your individual requirements.

In addition to traditional decommissioning solutions, such as cement slurry and tank removal, we are proud to be able to offer the alternative cost effective option of foam injection utilising our specialist equipment and Basel resin.

Unlike concrete there is no need to gas free the tanks before injecting the resin. All that is required is for the tanks to be emptied of residues beforehand, as the foam absorbs any hydrocarbons left present in the tank, rendering the tank inert and safe.

As the foam weighs only 25kg per 1000 litres it remains easy to remove the tank at a future date. Alternatively, depending on the original condition of the tank, the resin can be easily removed and the tank put back in to service.

Ancorra will prepare all necessary risk assessments and method statements and will liaise with the appropriate Licensing Authority on your behalf prior to undertaking any work.

For more information on our Forecourt and Decommissioning Services please contact **Simon Palmer**, on **07900 740980** or email **simon@ancorraenvironmental.co.uk**

Interceptor Servicing

In order to be effective interceptors require regular maintenance otherwise they will no longer contain oil and/or fuel from being released into the drain and they may become blocked from a build up of sludge

The Environment Agency advises, in Pollution Prevention Guide 3, that interceptors be inspected regularly and emptied as soon as a significant quantity of oil and/or silt has built up. Ancorra can empty and clean all types of interceptors and separators and are happy to provide a free site survey to assess your requirements and answer any queries.

Our team will work with you to minimise any disruption to your business by efficiently emptying, re-filling and putting the interceptor back into service as quickly as possible.

When you employ Ancorra to service your interceptor you can be confident that all of your legal obligations will be met and we will provide you with all the necessary paperwork to demonstrate your compliance to the Regulations.

For more information on Ancorra's interceptor servicing please contact:
